Lesson plan, Tomer's flow: can your classmates escape a world you invented?

Draft for Tomer's review

Not tried with children. Timings are targets: nothing has been timed with a class, and the Lovable build wait for eight pairs at once is not measured.

This is the format Tomer asked for: what I say, what the children do and click, timings, partner turns, where they make their own decisions, how I help when someone gets stuck, setup, saving and reopening, sharing, and which parts happen where. Paper first, then Lovable inside imagi Edu. The Escape Builder prototype is not used by the children in this version.

Learners	16 Grade 7 learners in 8 pairs (pair 1 = learners 1 and 2, pair 2 = learners 3 and 4, and so on)
Devices	8 shared laptops with Chrome and Wi-Fi, one projector laptop
Time	45 minutes, plus an optional 15-minute extension
Adults	One facilitator
Where it happens	Paper, then Lovable inside imagi Edu. The demo game runs on the projector only
Demo game	Alien Snack Shop: https://imagi-mockup.vercel.app/alien-snack-shop-v1.html

About the demo: Alien Snack Shop is a hand-built example of what the starting prompt asks Lovable to make. Kai wrote it by hand; it is not a Lovable build. It sits on a site outside imagi, so it is shown on the projector only. Its code is 742: the receipt on the counter lists Star 4, Moon 2, Rocket 7, and the lock shows Rocket, Star, Moon.

Every step carries one of these labels:

Label	Means
[Projector]	The facilitator's laptop on the projector. Learners' laptops closed
[Paper]	Pencil and paper. No laptop
[imagi/Lovable]	Learners work in Lovable, opened inside imagi Edu
[Laptop + paper]	Both: the game on screen, the card on the desk

Setup before class: target under 20 minutes

Min	Step	Where	Status
5	Check each laptop opens imagi Edu and then Lovable on the student route. Leave each one open on imagi. [Steps from Liba]	[imagi/Lovable]	Not tested: student route needed from Liba
3	Check the credits for each pair. [Where to look: added after testing]	[imagi/Lovable]	Allowance unknown

Min	Step	Where	Status
3	Open the starting-prompt document. Paste it once on a student laptop and check it arrives whole	[imagi/Lovable]	Not tested
2	Open Alien Snack Shop on the projector laptop. Click Restart so it starts fresh	[Projector]	Hosted; not checked on a school network
4	Print: 8 idea cards, 8 playtest cards, 8 help cards, 16 of check A, 16 of check B, 16 maker notes, 16 take-home cards, 2 paper backup sets	[Paper]	Idea and playtest cards ready to print: kit/student/pdf/idea-card.pdf, kit/student/pdf/playtest-card.pdf
3	Write learner numbers 1-16 on every sheet. Mark who starts as Partner A (odd numbers) and Partner B (even numbers). Put one pair at each laptop	[Paper]	Ready

Never write passwords on the board or in any document. Each pair's project is named "Escape - pair N", with no real names.

What you need

Item	How many	File	Status
Idea card (world, clue, code, ending, colours and mood)	8, one per pair	kit/student/idea-card.md; PDF: kit/student/pdf/idea-card.pdf	Draft
Playtest card (prediction, what the player did, Change / Because / Keep / Check, retest result)	8, one per pair	kit/student/playtest-card.md; PDF: kit/student/pdf/playtest-card.pdf	Draft
Student guide slides	1, on the projector	kit/student/guide.md	Draft
Starting prompt, in a shared document children copy from	1 document	lovable/starting-prompt.md; [link from Liba]	Not yet built in imagi in this form
Help card	8	kit/student/help-card.md	Draft
Checks A and B	16 each	kit/student/checks.md	Draft; not piloted
Maker note	16	kit/student/maker-note.md	Draft
Take-home card	16	take-home-card.md	Draft
Paper backup	2 sets	paper-backup.md	Draft
Change / Because / Keep / Check guide (teacher reference)	1	lovable/change-keep-check.md	Draft
Scoring guide and observation sheet	1	scoring-guide.md	Draft

Item	How many	File	Status
Pencils	16		

Minute by minute

Min	Where and keyboard	What I say	Children do and click	Children decide	If someone is stuck
0-2	[Projector]. Teacher, then a volunteer	Open Alien Snack Shop. "Can your classmates escape a world you invented? Today you'll build one, test it on a classmate and make it better. Someone built this one by hand, to show the kind of game you'll ask the AI to make. Who wants to try it?"	The volunteer (by learner number) clicks things in the shop, tries a wrong code, presses Hint, finds the receipt and the lock pictures, types the code and reaches the snack party. The class calls out guesses	The volunteer: whether to press Hint or try again	"Want a hint, or one more try?" Never say the code
2-5	[Paper]. Nobody	Hand out the starting check. Odd numbers get A, even numbers get B. "On your own. Write what you think. There's no trick."	Starting check alone, up to 3 minutes. No partner, no AI	Their own answers	Read a question aloud if asked, and note "read aloud" on the sheet. Keep the first answer before any coaching
5-8	[Paper]. Nobody	"Your idea first. The AI comes after. Each of you writes at least one line. Don't copy the snack shop: this is your world."	Fill the idea card: world, clue, code, ending, colours and mood. A phrase or a sketch is enough	Their world, clue, code, ending and look, before any AI suggestion	"Who will play it? What would make them smile?" or "What is one thing in your room that could hide a number?" Wait. Write their words, not yours

Min	Where and keyboard	What I say	Children do and click	Children decide	If someone is stuck
8-10 (target, untimed. reference/assignment.md asks for a first playable game by minute 10. With the prompt sent at 8-10 and up to 3 minutes of build, it may arrive at 11-13. Loom 1 times one build on 6 Nov (result in checkpoint/test-log.md); it still needs timing with children)	[imagi/Lovable]. Partner A	"Copy the prompt, fill the five blanks from your card, and send it. While it builds, each of you writes one prediction."	Partner A: in imagi Edu, open Lovable; start a new project named "Escape - pair N"; paste the starting prompt; fill the five blanks from the card in their own words; send. Both, on the playtest card: "When I type a wrong code, I think the game will ___."	The words in the five blanks; their prediction	Can't log in after 3 minutes: paper backup. Build over 3 minutes: refresh once, then paper backup
10-17	[imagi/Lovable]. Partner A	"Was your prediction right? What would make it feel more like your world?"	Play Version 1: click things, a wrong code, an empty code, Hint, the right code, Restart. Then send one change in their own words: the clue, a message or the ending. Play it again	Which part to make more their own, in their words	"Lovable says it's done. What happened when you tried it?" No playable game by minute 12: paper backup
17-23	[imagi/Lovable]. The player	Pairs 1 and 2 swap, 3 and 4, 5 and 6, 7 and 8. "Players, play. Creators, no helping and no pointing. Watch where they get stuck." At minute 20: "Swap. The other two now."	17-20: one learner plays the neighbours' game on their laptop while one of its creators watches. 20-23: the other two swap in. Watchers write on the playtest card: "The player clicked ___ first. They got stuck at ___."	Players: when to use Hint. Creators: what to write down	Player stuck: "Want a hint, or one more try?" Creator wants to help: "Watch where they get stuck. That's what you'll fix."
23-31	[Laptop + paper]. Partner B	"What did your player do? Which change helps them? Why that one?"	Each child proposes one change. The pair picks one and writes on the playtest card: "Version 1 works when ___." Then Change / Because / Keep / Check. Partner B types it into Lovable and sends. Both predict: "After this, a new player will ___."	Which thing the player did matters most; which change answers it; what must stay	Pair disagrees: "What does each of you want the player to feel? Which change tests that?" Vague line: show one row from the vague-and-clear table in the Change / Because / Keep / Check guide, once

Min	Where and keyboard	What I say	Children do and click	Children decide	If someone is stuck
31-35	[imagi/Lovable]. Partner B	"Test the change, then one thing that should still work." Then: "Lovable says it's done. What happened when you tried it?"	Test the change. Then test a kept rule: a wrong code stays shut, and Restart clears everything. Write the result next to the prediction. If there's time, a learner from another pair who hasn't seen the game plays it	Whether the retest passed, and what to tell Lovable if it didn't	Change broke the game: restore is not tested yet. Send: "Undo the last change only. The game should work like before: ___. Keep everything else."
35-38	[Paper]. Nobody	Hand out the other check. "Same as before: on your own."	The other check, alone (A if they did B first, B if they did A)	Their own answers	Keep the first answer before any coaching
38-45	[Laptop + paper]. Both	"Close your Lovable tab. Open your project again from imagi and check it's still there." Then: "What would you add next?" If a minute is left, ask two pairs: "What did you change that made it work better?"	Close the Lovable tab. Reopen the project from imagi and check Version 2 is there. Fill the maker note. Fill the take-home card: the game, one choice we made, the next idea	Their next idea, and their first step toward it	Project missing after reopening: note the pair number and tell Liba. Saving on the student route is not tested yet

Extension (15 minutes, optional): another upgrade from the challenge ladder, or a second test with a new player. Never for finishing the core.

Partner turns

Block	Partner A (odd number)	Partner B (even number)
Idea card (5-8)	Writes at least one line	Writes at least one line
Send and play Version 1 (8-17)	At the keyboard	Writes a prediction; suggests what to make more their own
Playtest (17-23)	Plays once, watches once	Plays once, watches once
Version 2 (23-35)	Proposes one change; says what to test and what should happen	At the keyboard; proposes one change
Save and note (38-45)	Own maker note and take-home card	Own maker note and take-home card

A child may say or sketch an idea if writing is hard. The partner or the teacher writes it down in the child's words.

Where children make their own decisions

Minute	The decision	What the teacher does
5-8	Their world, clue, code, ending, colours and mood	Asks one question and waits. Never fills the blank
8-10	The words in the five blanks; their prediction	Checks the words came from the card
10-17	Which part to make more their own	Asks what would make it feel like their world
17-23	Players: when to press Hint. Creators: what to write down	Offers "Want a hint, or one more try?"
23-31	Which thing the player did matters most; which change answers it; what to keep	Asks what each choice would do to the player
31-35	Whether the retest passed	Asks what happened, not whether Lovable said "Done"
38-45	Their next idea and first step	Writes nothing for them

When someone is stuck

Problem	Do or say
Can't think of an idea	Ask one at a time: "Who will play it? What would make them smile?" "What is one thing in your room that could hide a number?" Wait. Write their words, not yours
Wants to copy the snack shop	"That one's taken. What's a place you'd like to be locked in?"
Two clue ideas, can't choose	"Name two places the clue could be. Which is fairer for a first-time player?"
Unsuitable idea	"Would a 12-year-old in another class enjoy this? What could you change so they would?"
Can't log in	[Steps from Liba]. Over 3 minutes: paper backup
Build takes over 3 minutes	Refresh once. Then paper backup
No game by minute 12	Paper backup. Note it on the per-pair sheet
Lovable added sign-in, a database or pictures from the internet	Send: "Remove the ___. Keep the room, clue, lock, hint, ending and Restart."
Lovable says "Done"	"What happened when you tried it?" Then run the Check line
A change broke the game	Restore is not tested yet. Send: "Undo the last change only. The game should work like before: ___. Keep everything else." If that fails, paper backup
Player stuck	"Want a hint, or one more try?" Never give the code

Problem	Do or say
Creator wants to help the player	"Watch where they get stuck. That's what you'll fix."
Pair argues about the change	"What does each of you want the player to feel? Which change tests that?"
"Make it easier"	"What did your player do just before they got stuck?"
Hint gives the code	"Should the hint give the answer or help the player find it? What would each choice do to the puzzle?"
Project missing after reopening	Note the pair number; tell Liba

Notice when a player asks to make their own game. Polite praise doesn't count.

Saving and reopening [imagi/Lovable]

Step	What to do	Status
Save	Expected: Lovable keeps the project and each version as the pair works, so there is no Save step to teach. Check this during prep	Not tested on the student route
Close and reopen	At 38-45, close the Lovable tab. In imagi Edu, open the pair's project ("Escape - pair N") and play it once	Not tested on the student route. Exact clicks added after testing
Project missing	Note the pair number and tell Liba. The take-home card still records the game in words or a drawing	
Back to a working version	Restore is not tested yet. Until it is, the pair sends: "Undo the last change only. The game should work like before: ___. Keep everything else."	Not tested

Sharing

Where	How	Who
In class	A classmate plays on the creator's laptop. Nothing leaves the room	Learners
Take-home	The take-home card with a drawing or a screenshot of the game. No link	Learners, with the teacher
A link to play at home	Only if Liba has agreed. An adult publishes the game from Lovable. After that, the same imagi link opens for anyone. The adult opens it in a private browser window to check it opens without sign-in and shows only the game. The adult decides who receives it. An unlisted link is not private	Adult only. Play outside the class is recorded as untested

Before publishing, the link inside imagi Edu asks for sign-in. After the teacher publishes from Lovable, the same link opens for anyone, so publishing is the adult's sharing decision. Children never publish, and no link goes on a take-home card unless Liba has agreed.

Which parts happen where

Step	In this class	In the Escape Builder prototype (vision only, not used by children here)
Demo	Alien Snack Shop on the projector, from a site outside imagi	"Play an example first" opens the same game
Idea	Paper idea card, about 3 minutes	Ten guided questions; the room builds as you answer
First build	Lovable in imagi, from the starting prompt	The prototype builds a sketch room and hands over a Lovable brief
Playtest	A neighbour plays on the creator's laptop	Player mode with a prediction and a test record
Change	Change / Because / Keep / Check, written on the card, typed into Lovable	The same frame, plus building by hand
Save and reopen	The Lovable project in imagi (not tested on the student route)	Browser storage, on that one device only
Share	Screenshot, or an adult-managed link (not agreed yet)	A link shown to an adult first

Evidence

What	When	How
Starting check (A or B)	2-5	Alone, up to 3 minutes. Odd numbers A, even numbers B
End check (the other one)	35-38	Alone, up to 3 minutes
Idea card, playtest card, maker note	During class	Collected at the end
Observation sheet and per-pair sheet	During class	scoring-guide.md

Score each check on reason, instruction and test, 0 to 2 each, with scoring-guide.md. Score each child alone. A pair's game is not an individual score. These are classroom checks, not validated measures.

Skill	Where you see it	Look for
Making and explaining choices	Idea card; the "Because" line; maker note line 1; the pair's talk at 23-31	The idea is theirs, in their words. They can say why they picked one change over another
Giving AI clear instructions	The prompt in Lovable's chat; Change / Because / Keep / Check on the card; check Q2	Says what changes, for whom, and what must stay
Judging the AI's output	Prediction next to the result; the answer to "Lovable says it's done. What happened?"	They play it before they believe it. They describe what they saw, not a new wish

Skill	Where you see it	Look for
Testing and improving	Playtest line; retest result; check Q1 and Q3	The change comes from what the player did. They test the change and a kept rule

Per pair, record: first playable minute, paper backup used, adult rescues, build waits, the change chosen and why, and whether a player asked to make their own game.

After teaching

Date and class (learner numbers only)	_____
Pairs with a playable game by minute 10 / by minute 12	_____ / _____
Pairs on the paper backup	_____
Send step and longest build wait (minutes)	_____ / _____
Credits used	_____
Pairs whose project reopened from imagi	_____
Timings that slipped, and by how much	_____
Which child decision surprised me? (learner number and their words)	_____
Where did I help more than I meant to? What could I ask instead?	_____
Did any player ask to make their own game?	_____
One thing to change before the next class	_____
